Workspace
for Home

Whole Office One Piece of Furniture

Working from home usually means that the workplace spreads out over the entire home, or that you are forced to "sacrifice" a separate room for work.

Unclear boundaries between leisure and work hinder efficiency at work as much as relaxation during leisure time.

But most salespeople, designers, engineers, communicators, media creators or administrators don't need an entire room for home work.

All the cords can be hidden at the back

The desk top is made of glass, which gives a more airy look, and visibility to the storage box and the lower cabinet.

The fact that the entire piece of furniture is raised on legs contributes to the impression of lightness, and makes the floor easy to clean.

With the "Design your Thea" service, you can choose the model, wood type, lighting, knobs, colour of the legs, hinges and more to match the furniture to your home and your needs.

Thea is designed to be easy to install.
We recommend two people.

Thea consists of two cabinets
and a desk in tempered glass.

Thea stands on her feet
and is fixed to the wall using a solid
oak supporting structure.

The two cabinets
and the supporting structure
coming assemble
from the factory.

Fix the supporting structure
to the wall (4 screws)

Hang the base cabinet on the sup-
porting structure (4 wooden plugs)

Hang the top cabinet on the support-
ing structure (4 wooden plugs)

Slide the glass top and fix it

Connect the light system
Enjoy your work!
